Highlights of the Event:

- II :- Modern Economic Growth
- 4) What are the features or characteristic features of developing economies?
- A) Developing Economies :- A developing country is a sovereign state with a less developed industrial base and a low Human Development index (HDI) relative to other countries. They are highly populated and less industrialized nations. For example India, Pakistan, Sri Lanka, Somalia, etc. following are some of the basic common features of developing countries.
1. Low per capita income :- The per capita income of developing countries is very low as compared to developed countries, this means the average income per person in developing countries is very less and not sufficient to invest or to save. This is one of the most serious problems faced by underdeveloped countries. For example the per capita income of Luxembourg is \$US 1,31,300. is \$US 2116 as per IMF estimations.

INDIA IS A DEVELOPING ECONOMY

"Basic characteristics of India as a developing Economy."

LOW PER-CAPITA INCOME :-

Per capita income in India is very low. The per-capita income of Switzerland, West Germany, U.S.A, Japan greater than the per-capita income of India.

IMPORTANCE OF PRIMARY PRODUCTION:-

Agriculture occupies the most important place in the Indian Economy. About half of the total working population is employed in agriculture.

Before economic planning, agriculture contributed more than 50% to the national income.

POPULATION PRESSURE:-

The rate of population growth is also very high. The death rate declined due to improved medical facilities etc. while the birth rate did not decline correspondingly. This caused population explosion.

UNEMPLOYMENT AND UNDEREMPLOYMENT:-

Unemployment and underemployment is another feature of Indian Economy. The actual unemployment might be much more than this. In addition to unemployment there is large scale underemployment.

* Light factor *

Light is one of the most vital and Essential abiotic Ecological factor without which no life can exist. The chief natural Source of Light are Sunlight, moonlight, Starlight and the light from light producing / Luminescent Organisms, only sunlight has greatest Ecological Significance being the primary Source of Energy in nearly all Ecosystems. The Entire food chain starts with Organisms that are photosynthetic would perish, not just the plants. Light differs from the temperature factors in that while light is highly directional heat often reaches the living Organism from many different directions at the same time. Light is also Extremely variable. Ecologically Variations in the quality of Light the intensity of Light and the duration of Light are known to influence different Ecosystems.

Classification of Antibodies.

Antibodies are Proteins against antigens, antibody (Ab) is also known as Immunglobulin (Ig). These are large, Y-shaped blood proteins produced by plasma cells. They bind to foreign particles and invade them. These particles are foreign bodies that get attacked by antibody. Antigens are foreign proteins invade body capability give rise to response our Immunity system.

Hence, Antigens stimulate the Production of Antibodies by the Immune system.

Primary Protein Protein by the basic structure of Immunglobulins are made up of polypeptide chains. Each light is made up of 25,000 daltons having amino acids having molecular weight of 50,000 daltons.

Antibody Structure:-

The N-terminus of each heavy chain forms an antigen binding domain with light chain. These are two antigen binding segments forming with arms of Y-shape. They are known as antigen binding (Fab) domains.

The C-terminus of the heavy chains forms segment crystallization Fc domain helps in interaction with effector cells. All four polypeptide subunits held together by disulfide bonds.

The heavy chains of the antibodies contain a variable region and three constant regions.

* पुस्तकालय का महत्व

एक पुस्तकालय एक शैक्षिक संस्था के दिल और आत्मा है। एक कॉलेज या स्कूल का पुस्तकालय अपनी पुस्तकालय से है वास्तव में, अकेले अक्सर केवल एक शून्य नहीं बनाते हैं।

एक पुस्तकालय किताबों और पत्रिकाओं और एक संग्रह है। लेकिन इसमें कुछ भी है। एक पुस्तकालय ज्ञान का मंदिर और लौगा के लिए परदा है। यह वह जगह है जहां ज्ञान संरक्षित है।

पुस्तकालयों के कई उपयोग हैं एक पुस्तकालय ज्ञान फैलाता है ग्रिब लोगों, विशेष रूप से ग्रामिण छात्रों, जो किताबों खरीदने का जोखिम नहीं उठा सकते, लाइब्रेरी का सर्वश्रेष्ठ उपयोग कर सकते हैं। वे किताबों आधार ले सकते हैं और ज्ञान प्राप्त कर सकते हैं। वे यहां तक कि अमिर मनुष्यों में सभी किताबों नहीं हो सकते हैं और अहो: पुस्तकालय पर भी होना चाहिए!

दूसरे, पुस्तकालय छात्रों को किताबों पढ़ने की आदत विकसित करने के लिए प्रेरणा देता है। पढ़ने के कक्ष में एक वातावरण प्रदान करता है जहां हर एक किताबों का अध्ययन करवा चढ़ा है। एक पाठ्य पुनीति कि नहीं खोजें, आविष्कार और दिन-प्रतिदिन मामलों के

सन् 1981 में, अमेरिका के लॉस एंजिल्स शहर के रेगियो में, डॉक्टरों को कुछ विषम लक्षण दिखाई दिए। वहीं पर समलिंगी संबंध करने वाले कुछ युवा लोगों में एक विषम प्रकार का श्वसनिक और त्वचा का कर्करोग या कैंसर देखा गया। वैज्ञानिकों को शरीर की नैसर्गिक रोग प्रतिरोधक शक्ति को कम करने वाले कोई भी कारण नहीं मिले। इस रोग को गै-रेलेटेड इम्यूनोडेफीसिएन्सी सिन्ड्रोम (Gay-related immunodeficiency syndrome) या GRID नाम दिया गया। कुछ समय के बाद वैज्ञानिकों ने समलिंगी संबंध करने वाले, शिशुओं से मादक द्रवों का सेवन करने वाले और हीमोफीलिक लोगों में भी दिखाई दिए। ये लोग समलिंगी संबंध रखने वाले नहीं थे। तब वैज्ञानिकों ने सोचा कि यह रोग प्रतिकारक शक्ति कम करने वाले किसी विषाणु से होता होगा और इस तरह इसका नाम बदल कर एक्वाइरड इम्यूनोडेफीसिएन्सी सिन्ड्रोम (Acquired Immuno deficiency Syndrome - AIDS) रखा गया। सन् 1983 में फ्रेंस में प्रसिद्ध वैज्ञानिक डॉ. लुक् मोंटैनियर ने इस रोग के विषाणु की खोज की। उसी समय अमेरिका के डॉ. रोबर्ट गालो को भी यही विषाणु दिखाई दिया। ब्रुसेल में इस विषाणु को अलग-अलग वैज्ञानिकों ने अलग-अलग नाम दिए। लेकिन बाद में इसे 'ह्यूमन इम्यूनोडेफीसिएन्सी वायरस (एच.आय.वी.)' नाम दिया गया, जिसका अर्थ है, मानव शरीर की रोग प्रतिकारक

(3) what are the differences between economic growth and economic development.

Economic development :- it is defined as a study and continuous rise in the aggregate real output of an economic (GDP) over a long period.

Economic Growth	Economic Development
1) it refers to an increase a country's real output of goods and services.	it refers not only to economic growth but also to progressive changes in the socio economic of a nation.
2) it is a phenomenon.	it is a process.
3) it consists of only quantitative changes.	it explains both qualitative and quantitative changes.
4) it is a single ^{bested} concept.	it is multi dimensional concept.
5) it does not require government intervention.	this is only possible with a nation's government intervention.
6) it will happen with more technological progress.	it will happen with more improvement in the quality of life people.
7) its scope is narrow to only economic growth.	it is wide in scope including economic cultural changes.

Assign Assignments

1. Explain the concept of economic growth?

The terms 'economic growth' and 'economic development' 'economic progress', 'economic welfare' 'secular change' is more often used synonymously. But economists have drawn a line of difference between these two. Yes economic growth and economic development.

• A long period:

Increase in production capacity of the country of goods and services should be possible in the long run.

• Increase in real G.D.P.

Economic growth considers only real

• study and continuous rise

The real G.D.P of the nation is to increase study and continuously without any downs.

Highlights of the Event:

Critically examine The balanced growth strategy

Introduction The underdeveloped countries have broadly focused on two strategies of development viz balanced growth strategy and unbalanced growth strategy. Western economists like Ragnar Nurkse.

Arthur Lewis, Young, Rosenstein, Rodan have advocated the strategy of balanced growth for underdeveloped

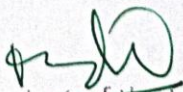

meaning The concept of balanced growth is not a static but dynamic one because its interpretation continues changing. In one context balanced growth may mean investment in the depressed sector of an economy while in the other context it may stand for harmonious development of different sectors. Anyhow the definition for the balanced growth strategy given by P. K. Ghosh is considered as the most suitable definition.

Definition Planning with balanced growth indicates that all sectors of one economy will expand in the same proportion so that consumption, investment and income will grow at the same rates.

As per the definition balanced growth can occur when the growth rates of consumption, investment and income are equal. This can be expressed as...

$$\Delta C/C = \Delta I/I = \Delta Y/Y$$

- * Most Polysaccharides are antigens but they do not possess sufficient Chemical biodiversity the antigenicity
- * Blood group antigens are strong Immunoglobulins
- * Nucleoproteins are strongest antigens because Nucleic Acids
- * Lipids can be Non Immunoglobulins but Cardiolipin acts as Epitope

BT Cotton:- Some strains of *Bacillus thuringiensis* produce proteins that kill certain insects such as lepidopterans (tobacco bud worm army worm) coleopterans and dipterans (flies, mosquitos). *B. thuringiensis* forms protein crystals contain a toxic insecticidal protein. Why does this toxin not kill the *Bacillus*? Actually the BT toxin, it is converted into an active form of toxin due to the alkaline pH of the gut which solubilise the crystals. The activated toxin binds to the surface of midgut epithelial cells and weak pores that cause cells swelling and lysis and eventually cause death of the insect. Insect-specific BT toxin genes were isolated from *Bacillus thuringiensis* in 1981 and incorporated into the choice of genes depend upon the crop and the targeted pest as most BT toxins are insect group specific. The toxin is coded by a gene named *be* Cry. There are a number of them for example the proteins encoded by the genes *Cry IAC* and *Cry IAb* control the cotton boll worms that of *Cry IAb* control corn borers.

ELISA :-

Enzyme linked Immuno Sorbent assay ELISA is highly sensitive highly specific and less expensive technique used in serology to detect antigens/antibodies this test involves the linking of various "label" enzymes to either antigens or antibodies. ELISA is based on the two principles

- 1) Antibodies and some antigens can adsorb to a solid support such as polystyrene, polyvinyl or polycarbonate wells
- 2) Antigens and antibodies can be linked to enzymes with the resulting complexes still fully functional both immunologically and enzymatically. Enzyme activity is used to measure the quantity of antigen or antibody present in the test sample. Enzymes used in ELISA include galactosidase, glucose oxidase, peroxidase and alkaline phosphatase.

Indirect method :-

1. It is used for the detection of antibodies.
Ex:- antibodies to HIV and Tubercle virus
2. In this technique the antigen is surface of cell wall
3. Test antiserum added and incubated

Thymus:-

In mammals the thymus is originated from the Epithelium of pharyngeal Pouches by about sheet it connected from the pharynx later Epithelial structure is filled up by the mesenchymal lymphoid cells formed from the foetal liver & bone marrow.

It is fully developed organ at birth. After birth the growth of the animal, it also increases size & reaches the maximum size. Then it involve into i.e of gradually decreases in size & becomes almost invisible in adult stage.

In human beings the thymus occurs two oval lobes behind top of the thyroid gland along the neck. All the time of birth about 15-20 gms & increase in size after birth it reaches about 40g in ut of puberty & this after its slowly disappears. the thymus is covered by a

Indirect Immunoprecipitation Assay:-

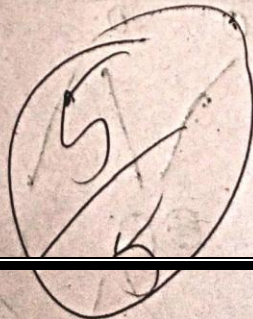

* It is used for the detection of antibodies (Ex: antibodies HIV and tubella virus in Serum sample)

* In this technique the antigen is adsorbed into the inner surface of cell wall.

* Test antiserum is added and incubated

* If any antibodies is the test antiserum have bound to the antigen, their presence is detected by adding & Enzyme linked anti Immunoglobulin (anti-body)

* Enzyme substrate is the added & the colour change can be detected by ELISA read in terms of optical density.

1) B-cells or B-lymphocytes

The B-lymphocytes derived its name from its site of maturation in bone marrow. Matured B-cells are characterised by the presence of membrane bound immunoglobulin (antibody) molecule which acts as receptors for the antigen.

Appropriate interaction b/w antigen & membrane bound antibody in B-cells, B-cells divide repeatedly differentiating into a population of plasma cells and memory cells. Plasma cells are the actual cells that secrete the antibody.

The bilobed thymus is covered by a fibrous capsule. Each lobe of thymus is organised into lobules which are separated from one another by septa arising from the capsule called trabeculae within each lobule. The cells are arranged into an outer cortex and an inner medulla. The cortex is lightly packed with proliferating immature lymphocytes while the medulla contains more mature cells. The epithelial cells of the thymus are known to synthesise a group of thymus hormones such as thymulin, α thymosin and thymopoietin. These hormones are found to bring about the transformation of lymphocytes to T-lymphocytes. The T-lymphocytes are not morphologically distinguishable from B-lymphocytes. But they differ from B-lymphocytes presence of surface marker antigen, present in the T-lymphocytes.

Critically Evaluate The Quantity Theory of Money?

Introduction :-

The Transaction Version of the Quantity Theory of Money was provided by the American economist Irving Fisher. In this book, he discussed the purchasing power of money (1911). According to Fisher, other things remaining unchanged, as the quantity of money in circulation increases, the price level also increases in direct proportion, and the value of money decreases and vice versa.

Fisher's Quantity Theory will be explained with the help of the following equation.

$$\begin{aligned} MV &= PT \\ (\text{or}) \\ P &= \frac{MT}{T} \end{aligned}$$

M = Total quantity of legal tender money
 V = the velocity of circulation of M
 P = price level and $1/P$ = value of currency
 T = Total amount of goods and services.

YELLOW FEVER

Yellow fever is an acute viral haemorrhagic disease transmitted by infected mosquitoes. The "yellow" in the name refers to the jaundice that affects some patients.

Symptoms of yellow fever include fever, headache, jaundice, muscle pain, nausea, vomiting & fatigue.

A small proportion of patients who contract the virus develop severe symptoms & approximately half of those die within 7 to 10 days.

The virus is endemic in tropical areas of Africa & central & South America.

Large epidemics of yellow fever occur when infected people introduce the virus into heavily populated areas with high mosquito density & where most people have little or no immunity, due to lack of vaccination.
